

A dedicated service facility setting new standards in control valve servicing

State-of-the-art testing equipment, software and experienced technicians are backed by our comprehensive OEM technical expertise

- Dedicated service facility
- State-of-the-art testing equipment
- OEM engineering expertise
- Workshop and on-site capability
- Valve, actuator and controls tested simultaneously up to 640 bar
- On-site diagnostic testing

In servicing your valve, actuator and controls, our testing regime will test the whole assembly, simulating your operating conditions;

- Line pressure
- Actuator supply
- Instrumentation supply (3-15 psi / 4-20 mA)

Our system will test the body, seat leakage rates and produce a full test certificate for verification. Once returned, you can be safe in the knowledge that the whole assembly is ready for use.

Valve, controls and actuators are tested simultaneously on Weir's state-of-the-art testing equipment.
