

# Safety valve testing without interruption to plant operation

## Avoiding loss of productivity and improving profitability

Our online testing system is designed around proven software and the highest specification of equipment to assure the integrity of your safety valves and ensuring compliance with statutory requirements.

Benefits include:-

- Maximising safety valve integrity and efficiency
- Reducing plant testing downtime, avoids valve removal from system
- Capability to perform Hot and Cold testing to meet customer requirements
- Fast and safe automatic testing – computer controlled
- Accurate computer-generated results'
- System approved and certified to the ATEX Directive

Data acquisition software allows the system to keep full records of all your safety valves. Test results are stored on the database for future maintenance requirements. Full test results and certification are presented to comply with your statutory requirements and support further diagnostics as required.

Weir's online testing capabilities are backed by our safety valve OEM technical expertise.

Online testing avoids interruption to plant operation.
