

A global OEM providing valve service solutions to offshore oil & gas installations

Our capabilities extend to providing comprehensive supply and service offerings for isolation, control, choke and safety valves on offshore oil & gas installations.

As a valve OEM with strategically located service centres, we are able to provide our customers with total solution packages and asset management on every type, size and class of valves and actuators.

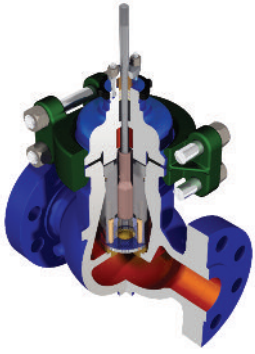

Resources and competencies

- Fully integrated HSEQ management system
- Highly experienced valve equipment engineers
- Dedicated field service team
- Project management
- Supply chain management
- Dedicated valve and actuator workshop with full testing facilities
- Dedicated focal point for valve services
- Cost benefits through dual competency of offshore engineers
- Faro Arm inspection capability

Engineering Expertise Applied to Service Solutions

Our extended service offering is based on our engineering expertise. This knowledge is applied to individual assets to achieve performance-enhancing upgrades and life extensions, through to analyses of systems and processes as part of improvement projects.

Weir's X-Stream™ severe service control valve.

Products & Services:

- Installation and commissioning
- Routine maintenance activities
- Fault finding and core crew provision
- Valves and actuation repair, overhaul and upgrade
- Inventory management
- Customer training
- Asset management
- Contract management
- Onsite field services
- Engineering services
- Plant Availability Enhancement
- In-situ testing and analysis
- On-line valve testing
- In-situ seat replacement
- Maintenance plans and routine health checks

Extensive workshop capabilities.

Local service centre.
